

C•CURE 9000 Fire Alarm Management Integrations

Features That Make a Difference:

- View critical security and fire events in one user-friendly interface
- Fire alarm activity is stored in the C•CURE journal for future investigative reporting
- Integrate with video recorders in order to capture, archive and replay video resulting from fire alarm initiating events
- Fire alarm events can trigger audio-visual notifications and send out information via email
- Display fire response procedures upon initiation of alarms
- Instantly reports object status such as a smoke detector in poor condition
- Automate camera angles and views to where a fire is detected
- View fire panel event status for quick investigation
- View AC power status, battery status, and more for quick troubleshooting

C•CURE seamlessly integrates with top fire alarm panels to instantly provide visibility of the nature and location of fire and other emergencies within your facility. Support thousands of points allowing security personnel to view all critical events, including access violations, video alarms, and fire alarms, all from one centralized station.

The C•CURE fire alarm control panel integration provides visibility of critical fire devices directly from the C•CURE monitoring station. This union provides extensive system integration benefits, including the ability to receive secondary annunciation from the linked fire alarms.

You can easily create and configure the monitoring of fire alarm panels within C•CURE, capture event messages, and then process and display them as C•CURE events. The fire alarm panels also support multiple device types including fire sensors, fire zones, and call points.

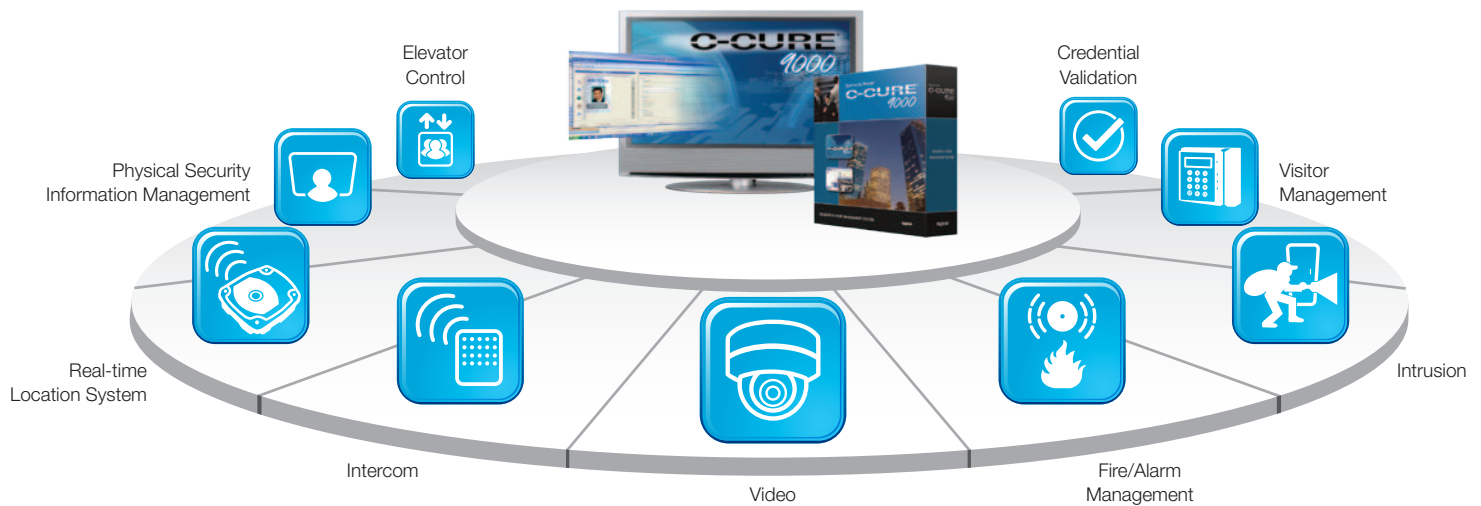

Trigger C•CURE events based on fire alarm conditions to automate response and provide visibility to command center staff. Trigger video record actions, change access levels, unlock doors and provide additional communication to staff through available integrations. Instantly bring up views of occupancy counts when fire alarm conditions occur.

Industry's Most Robust Integration Program: Software House Connected

Dozens of professional developers are enrolled in the Software House Connected Program to bring you myriad integrated solutions including video, intrusion, intercom, fire alarm management, PSIMs and more. The integrations are thoroughly tested and delivered to you through the intuitive C•CURE 9000 interface. For a complete list of available integrations please visit www.swhouse.com.

Current Fire Alarm Management Integrations Include:

- Simplex 4100 U/ES
- MZX Fire Alarm Panel (Available in Europe, the Middle East, and African markets only)
