24CC/24CS (shown)

The 24CC and 24CS M/P Converters are motor driven pneumatic regulators with motor assemblies enclosed in a commercial enclosure.

The AC Control Unit for the 24CC unit is a continuous operation motor available in 115vAC.

The control assembly for the 24CS unit is a stepper motor with an integral Translator Board which converts 23-26vAC digital pulse inputs supplied by the customer, into control logic to drive the motor.

Features

(Varies with 2400 Models)

- Output pressure locks in last position in event of power failure.
- Continuous AC Motor unit is instant start-stop, heavy duty impedance protected unit eliminates coasting and prevents burnout in the event of stalling.
- Stepper Motor capable of rapid start-stop with high running torque enables use in open loop control systems.
- Standard commercial enclosure or explosion-proof NEMA 4X housing for use in hazardous or harsh environments.
- Optional end of travel limit switches for user setting of minimum and maximum pressure values.

Summary

The table summarizes inputs and outputs for all the 2400 Series M/P Converters. Individual converters are described in separate sections.

Model	24CC	24CS	24XFS
Inputs	115vAC	23-26vDC (logic input)	1-5vDC 4-20Ma DC 12-15vDC 23-26vDC
Outputs psig [BAR] (kPa) *Model 30*	0-2 [0-0.15] (0-15)	0-10 [0-0.7] (0-70)	2-100 [0.15-7.0] (15-700)
Model 80		0-20 [0-.1.5] (0-150)	1-100 [0.1-7.0] (10-700)
Model 81	0-2 [0-0.15] (0-15)	0-5 [0-0.35] (0-35)	0.5-100 [0.03-7.0] (3-700)

AC Control Unit (CC)

The Precision M/P Converter consists of a heavy duty industrial permanent magnet type motor with gear box connected through a coupling to a threaded control screw which compresses the positive bias spring assembly of a Model 30, 80, or 81 Precision Regulator.

Limit switches switch off the current to the instant START/STOP motor when a maximum or minimum pressure is achieved. Electrical connections are made to the terminal block inside the motor cover.

A variety of motor options are available to assure optimum adjustment rates according to specification application.

Motor reversal is achieved by applying voltage between the common terminal of the terminal block and the alternate motor winding (both windings are wired to terminals on the terminal block).

Commercial Stepper Motor

The Model 2400 M/P Converter equipped with a stepper motor is a digital pulse controlled pneumatic regulator. Principle components include a 200 step/revolution stepper motor, a gear train connecting the motor and range screw , a translator circuit board and a pressure regulator. Switches used in the unit are Home Reference switches.

Electronic circuits in an integral translator convert the digital pulse input signals into control logic that operates a 200 step per revolution stepper motor. The stepper motor in turn controls the output of a pressure regulator by driving its range screw through a 4.5:1 reduction gear. The translator consists of a control logic section and a power output section.

NOTE:
The user's computer must supply the digital input pulse in accord with the specifications for stepper motor operation on page 47.

The Control/Logic section contains the logic sequence that determines the proper switching of the stepper motor windings to accomplish rotation. This section accepts the input signal that controls the direction of the motor and the type of switching sequence which is transmitted to the motor windings. This section also contains a pulse width modulated chopper circuit that controls the current in the motor windings.

All inputs have pull up resistors to place them in a HIGH logic state. As a result all inputs can be changed by switch closures. This simplifies manual control circuits and as a result the controlling device does not have to supply input current to the translator inputs.

Catalog Information

Please refer to the full range adjustment time table page 47 and select the proper pressure range and regulator model for your application. Choose the speed (rpm) which will provide the closest adjustment time in seconds. Include all appropriate designations as outlined in the following example:

Model 2400 Explosion-Proof M/P Converters

24XC/24XS (shown)

The 24XC and 24XS M/P Converters are motor driven pneumatic regulators with motor assemblies enclosed in a NEMA 4X Explosion-Proof enclosure.

AC Control Unit (24XC)

The AC Control unit for the 24XC unit is a continuous operation motor available in 115vAC. A feedback potentiometer option is available for these units.

DC Pulse Input Unit (24XS)

The DC pulse input assembly for the 24 XS unit is a Clock Generator/Translator board available for the 12vDC or 24vDC pulse input. This allows the use of an external Controller with a 12vDC or 24vDC output.

DC Analog Input Unit (24XS)

The DC analog input assembly is an Amplifier (Proportional Control) and Translator board which allows operation with a 4-20mA or 1-5vDC analog input. Minimum-maximum limit switches are standard on this unit. Reverse action and split ranging on the analog unit can be achieved in the field.

TTL Input (+5vD) (24XS)

The TTL input unit is equipped with a Translator board only. The user is required to supply the digital input pulses.

The control assembly for the 24XS unit is a stepper motor with an integral Translator board which converts 12vDC or 24vDC digital input pulses supplied by the customer into control logic to drive the stepper motor.

Full Range Adjusting Time for TTL Unit

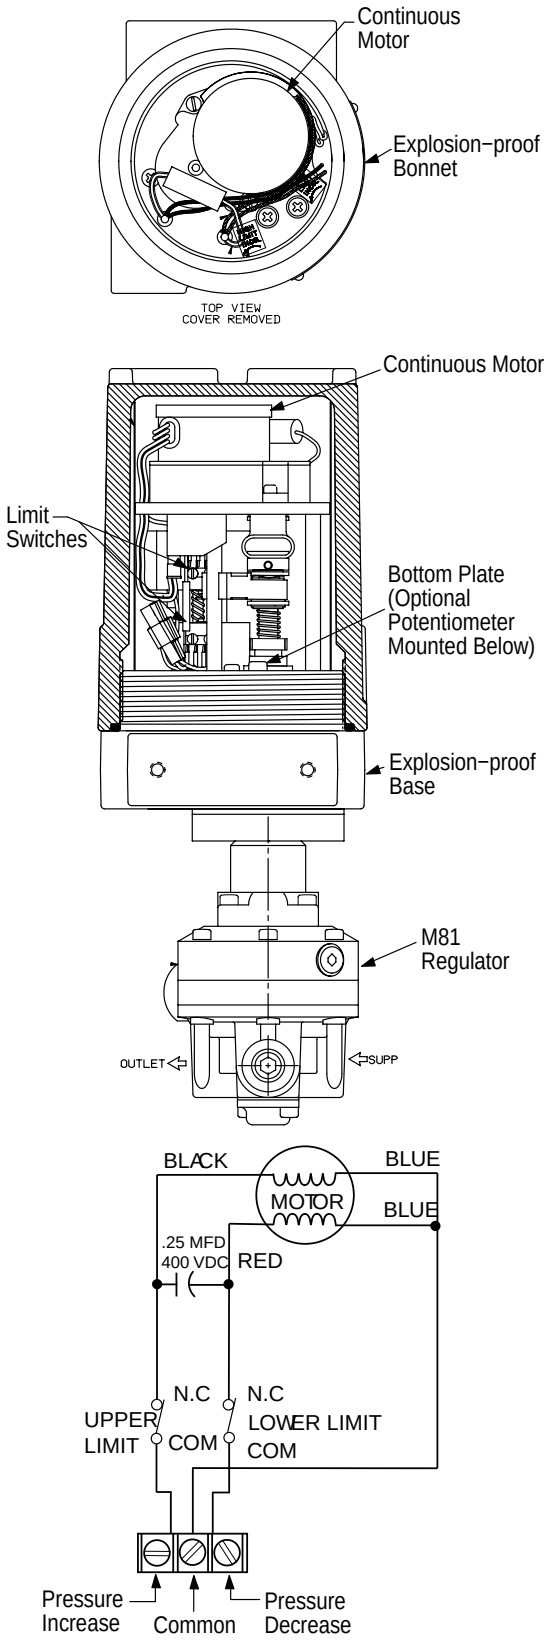
NOTE: Required PPS for a specific FR Adj. Time can be calculated as follows:

$$PPS = \frac{\text{FR Adj. Time @ 500 PPS} \times 500}{\text{Required Fr Adj. Time}}$$

For 110.8 Second Time Requirement

$$PPS = \frac{13.3 \times 500}{110.8} = 60.01 \text{ PPS}$$

AC Control (XC)



Explosion-Proof AC Control Unit (XC)

The Model 2400 M/P Converter is isolated from an explosive environment by enclosing it in an explosion-proof housing. The Continuous Motor configuration includes limit switches.

The Continuous Motor is mounted on the top plate of the motor assembly. Wiring to the unit is made to a terminal block through a 1/2-14 NPT conduit fitting in the base of the housing.

The units as configured at the factory are wired so that connections to the motor are wired to the Normally Closed terminals of the limit switches. Customer connections are made to the Normally Open terminals of the the limit switches.

An optional potentiometer can be provided so that a feedback voltage proportional to the range screw travel is available to the customer. The potentiometer is accessed through the conduit fitting in the base of the housing.

Motor reversal is achieved by applying voltage between the common terminal of the block and the alternate motor winding.

Explosion-Proof Stepper Motor (CC)

The Model 2400 M/P Converter equipped with a stepper motor is a digital pulse controlled pneumatic regulator. Principle components include a 200 step/revolution stepper motor, a gear train connecting the motor and range screw, a translator circuit board and a pressure regulator. Switches used in the unit are Home Reference switches.

Electronic circuits in an integral translator convert the digital pulse input signals into control logic that operates a 200 step per revolution stepper motor. The stepper motor in turn controls the output of a pressure regulator by driving its range screw through a 4.5:1 reduction gear. The translator consists of a control logic section and a power output section.

NOTE:
The user's computer must supply the digital input pulse in accord with the specifications for stepper motor operation on page 47.

The Control/Logic section contains the logic sequence that determines the proper switching of the stepper motor windings to accomplish rotation. This section accepts the input signal that controls the direction of the motor and the type of switching sequence which is transmitted to the motor windings. This sections also contains a pulse width modulated chopper circuit that controls the current in the motor windings.

All inputs have pull up resistors to place them in a HIGH logic state. As a result all inputs can be changed by switch closures. This simplifies manual control circuits and as a result the controlling device does not have to supply input current to the translator inputs.

Explosion-Proof DC Pulse Input (XS)

The Model 2400 M/P Converter is isolated from an explosive environment by enclosing in an explosion-proof housing. The Stepper Motor configuration is equipped with a clock generator positioned horizontally, which plugs into a vertically mounted translator board. The configuration includes limit switches.

The Stepper Motor is mounted on the bottom of the motor assembly in the base of the explosion-proof housing. Wiring to the unit is made to a terminal board through a 1/2" - 14 NPT conduit fitting in the base of the housing.

The unit includes two single pole, double throw, double break limit switches.

Switches on the clock generator board allow selection of:

a) Internally or Externally powered controls loops.
b) Half-step or Full step mode.
c) High-Speed or Low-Speed operation.

Pulse Input

Explosion-Proof DC Analog Input (XS)

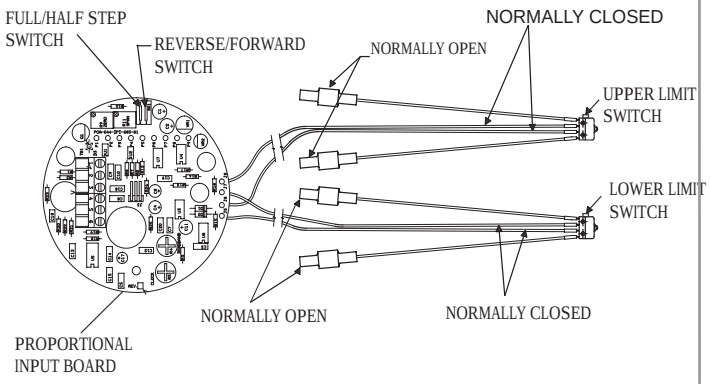
The Model 2400 M/P Converter is isolated from an explosive environment by enclosing it in an explosion-proof housing. The stepper motor configuration for this option is equipped with a Proportional Board mounted horizontally on the top of the Motor Assembly.

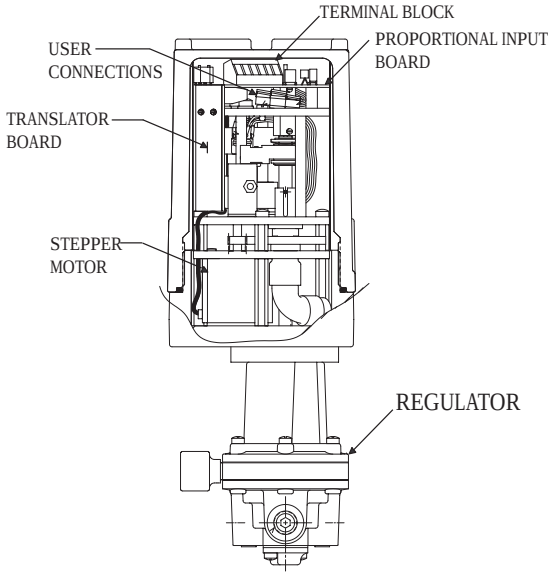
The output of the 4-20 mA Proportional Board is wired to a vertically mounted translator board. The configuration includes limit switches.

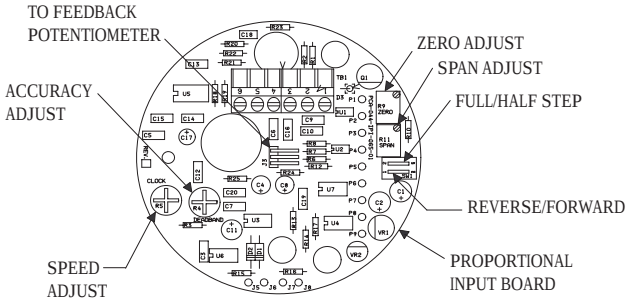
The stepper motor is mounted on the bottom of the motor assembly in the base of the explosion-proof housing. Wiring to the unit is made to a terminal block through a 1/2-14 NPT conduit fitting in the base of the housing.

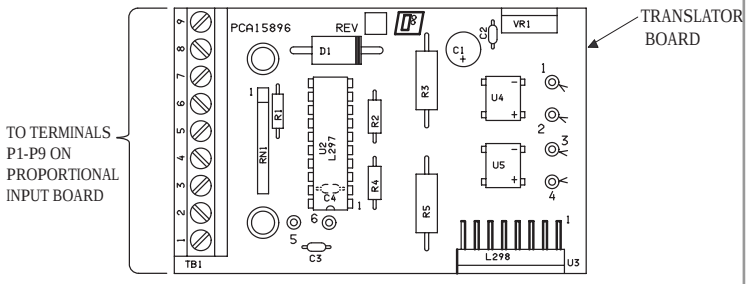
There is one switch (SW-1) located on the 4-20 mA board. SW-1 is made up of two switches (S1 and S2). S1 selects forward or reverse operation; S2 full or half step operation.

DC Analog Control









External Control Connections - Explosion-Proof (XS) Unit

Analog Input
4-20 mA, 1-5vDC Input

Connections are made to Terminal Board TB-1 as follows:

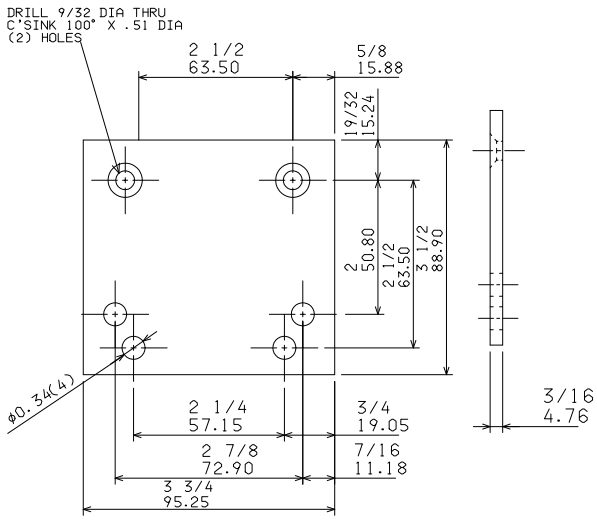
Terminal	Input Connection
1	4-20 mA signal current from Controller (+)
2	4-20 mA or 1-5vDC return (-)
3	1-5vDC signal voltage from Controller (+)
4	24vDC Power (+)
5	Common

The unit includes two single pole, double throw, double break limit switches. The Normally Closed terminals are used in the internal control circuit.

Normally Open terminals of the limit switches have connections available for customer use.

Switches on the Proportional Control Board allow selection of :

a) Reverse or Forward Operation.
b) Half-step or Full-step Mode.



Mounting Plate: 18188-1 part of **18187-1** (Optional)
Mtg. Kit includes 2 screws, 1-1/2" and 2" pipe clamps

Model 2400 Explosion-Proof Kit & Accessories

DC Pulse Input with 24 VDC Clock Generator Control	7
DC Pulse Input with 12 VDC Clock Generator Control	8
DC Analog Input with 12-24 VDC Supply	9

Pressure Range

	psig	[BAR]	(kPa)	
Model 10E	0.5-30	[0.03-2.0]	(3-200)	4
	0.5-20 [1]	[0.03-1.5]	(3-150)	3
Model 16	vac-10	[vac-0.7]	(vac-70)	8
Model 80E	0.5-20	[0.03-1.5]	(3-150)	3
	1-60	[0.07-4.0]	(7-400)	5
	2-100	[0.15-7.0]	(15-700)	6
Model 81E	0-2	[0-0.15]	(0-15)	1
	0.5-20	[0.03-1.5]	(3-150)	3
	1-60	[0.07-4.0]	(7-400)	5
	2-100	[0.15-7.0]	(15-700)	6
	0-5	[0-0.35]	(0-35)	7

Motor Speed

DC Motor Only	00
2 rpm	02
4 rpm	04
6 rpm	06
8 rpm	08

Enclosure

FM Explosion-Proof	2
FM Explosion-Proof with expanded temperature operation (XS Only).	3

[1] *Available on 24XFC Only.*
